Election/Restrictions

1. Applicant's election with traverse of Species 1, Figs. 1-7, in the reply filed on 10/29/7 is acknowledged. The traversal is on the ground(s) that "Species 1 shows an electrical switch circuit that includes ceramic substrates and first and second electrical devices. Species 2 in Fig. 8 depicts a three-phase bridge inverter circuit that includes three circuits, each having the elements of the circuit in Species 1..". This is found persuasive, thus requirement is withdrawn.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nagata et al. (6,831,528 B2).

Nagata '528 discloses forming a switch having a plurality of dielectric sheet of layers (substrates) connected to one another. However, Nagata '528 does not literally disclose having only three layer such as first, second and third substrates and also does not specifically disclose that the dielectric sheet layers is made of ceramic. It would have been obvious to employ the dielectric material such as ceramic, because the use of the ceramics are commonly used and/or will be used in an electronic packaging applications. Furthermore, it would have been obvious to rearrange the parts of the ceramic substrates by having first, second and third substrate, since it has been held that rearranging parts of an invention involves only routine skill in the art. *In re Japikse*, 86, USPQ 70.

3. Claims 2-21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The applied reference fails to disclose and/or suggest the limitations as set forth in claims 2, 5, 6, and 11-15.

4. Claim 22 is allowed.

The following is an examiner's statement of reasons for allowance: the applied reference fails to disclose and/or suggest the limitations as set forth in claim 22.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
